

## Outbound Mail Processing Systems

### Maximize your USPS presort discounts

Tritek outbound mail processing equipment is designed to sort all types of outbound mail and processes letters and flats up to 3/4" thick. These machines are USPS MASS certified and provide all the required reports for USPS presort discounts. The equipment operates on user-friendly Microsoft Windows software.

Tritek outbound mail processing equipment has a throughput speed of up to 30,000 mail pieces per hour on letter sorting equipment and 15,000 pieces per hour on flat sorting equipment. The Tritek OCR reader reads all types of machine printed and handwritten address blocks and is coupled to a MASS certified AVI lookup system which then applies IMB or Postnet barcodes for USPS presort discounts.

### Features

- Automatic feeding of letter and flat mail pieces
- Omni directional OCR reader
- Outgoing sorting (for presort discount)
- OCR recognition software
- Videojet PC37 Printer
- FastForward
- AVI DRS Software
- IMB, PostNet and all other types of barcodes
- Handprint and machine print reading
- Optional overhead tray racks
- Optional tray tag labeler
- Prints qualification report
- Prints 3600 report
- Prints 3553 CASS certification report
- Tray-based or bundle-based sorts for flats
